**Title: New Chemo Glove for latex free areas**

The new BioClean Ultimate co-polymer gloves not only offer protection from a full range of cytotoxic agents, but are thin and strong for greater dexterity and comfort.

The gloves are manufactured to the European Medical Gloves Standard EN455 and are suitable for use in sterile ISO class 5 cleanroom environments.

If you have a non-latex policy in your department, but still have the requirement for a robust, stretchy and comfortable glove that has over 7 hours of breakthrough time for cytotoxics, then this is the glove for you.

If you would like to try the gloves in your unit then please contact Helapet on **0800 0328 428** for more information and **FREE SAMPLES**.
